Adenium Seeds

We produce a wide range of hand pollinated Adenium seeds that give flowers of specified colors – these are not F1 hybrids but are still relatively uniform in growth pattern, leaves and flower color.

The number of colors offered from seed will soon increase as our Adenium breeding program proceeds.

Grafted Adenium Cultivars

Till about 20 years ago, there were only pink flowered Adeniums. Then we got some reds and a white. After that some patterns were introduced from Adenium somalense crispum. Crosses were made with A. swazicum to get deeper colors. Finally, about 10 years ago a double was found and we got doubles, triples and even more layers of petals per flower.

Today we have a big range of colours, lots of patterns, multiple petal layers and plants with different growth patterns. At Tropica we have selected the best out of over 300 cultivars and generally graft from this selection.

Our selections flower well with lots of buds per inflorescence, have deep green shiny leaves, branch well on pruning and are not easily susceptible to spider mites.

Offered Sizes:

We offer Adeniums in many sizes - from seeds to 2 meter tall, 30 year old plants. Most Adenium plants sold are grafted - unlike most growers, we graft low on young Adenium seedlings.

Our primary sales are in two sizes - “Liners” and “Regular”. Liners are 3 month old grafts with the graft-union well healed and scion giving 2 shoots. They come out of 6 cm square pots and we recommend they go into 10 cm pots for rooting.

Regular Size are mature plants from 12 cm pots that are multibranched and will go into 15 cm or larger pots.
